

Homework Practice

Use what you know about unit fractions to solve the problems. Draw a visual model to represent each equation.

$$\frac{2}{5} + \frac{2}{5} + \frac{2}{5} =$$

Madeline and Tyreek each ate $\frac{2}{3}$ of an individual sized pizza. How much did they eat in all?

A runner ran $2\frac{1}{5}$ miles on Sunday and $\frac{3}{5}$ miles on Saturday. How much farther did the runner run on Sunday than Saturday?

$$\frac{4}{3} - \frac{1}{3} =$$

$$\frac{12}{8} - \frac{5}{8} =$$
